

Agora Energy China launches new online presence

News

Agora Energy China develops feasible and science-based solutions to advance the clean energy transition in China and beyond. The climate advisory's analytical reports, events and studies are now available on a dedicated website.

Driven by a record-breaking expansion of renewables and deployment of clean technologies, China's energy transition is moving with remarkable speed and scale. With its emissions already plateauing and a clear climate action framework guiding policy, the country is demonstrating leadership in low-carbon solutions and transforming key sectors. As China advances towards its dual carbon goals, its vast technological capacity and evolving policy landscape ensure this transition is highly relevant not just domestically but also for regional and global climate efforts.

Supporting China's transformation through evidence-based analysis

Launched on its four-year anniversary, Agora Energy China's [new dedicated website](#) offers a comprehensive overview of its rigorous, evidence-based work designed to support decisionmakers, industry leaders, researchers and other key stakeholders. The platform significantly expands its existing presence beyond social media (such as on WeChat @AgoraEnergy) by centralising reports, policy briefs, data insights, press releases and timely updates in one place.

"China is deploying clean energy at an unprecedented pace and scale, drawing global attention. Translating this momentum into sustained climate outcomes, however, requires rigorous, granular policy insights tailored to China's distinctive and complex national circumstances," said Kevin Tu, Managing Director of Agora Energy China. "This new website integrates data, analysis and insights to support China's transformation and inform effective, cross-sector climate action."

Agora Energy China's efforts span multiple interconnected transformation topics, with a focus on delivering science-based, applicable solutions. The link between **AI and energy** is helping to optimise generation and consumption patterns, while experiences from **zero-carbon industrial parks and heating** demonstrate scalable approaches to decarbonise industry. **Power system transformation** and **distributed renewable energy** are redefining how electricity is produced and delivered. Agora Energy China's work on **electricity markets** is designed to help ensure efficient operation. **Just transition** and **coal transformation** streams explore how to foster social and economic sustainability, while **cross-regional cooperation** and **green hydrogen** provide the tools and pathways to connect sectors and regions with low-carbon solutions. Finally, experiences and lessons from **international cooperation** highlight how developments in China increasingly also offer insights that can support other economies striving to accelerate their own transitions.

With a team based in Beijing, Agora Energy China works closely with leading domestic stakeholders, including research institutes, universities and industry associations. These collaborations enrich the advisory's research and enable an exchange of perspectives that strengthens both policy design and cross-regional dialogue within

China. They also help ensure that the country's experiences, challenges and innovations can inform broader international efforts across Asia and beyond.

A new platform for knowledge, insights and engagement

All content on the website is currently available in Chinese, with selected publications featuring English executive summaries. The site also provides access to earlier English-language analyses focused on China's energy transformation. Visitors can explore publications, policy briefs, data insights and timely updates on policy developments and Agora Energy China's activities. The platform also features summaries of events, information on upcoming engagements, as well as press releases and media resources. An English language version of the website is planned for the future.

Strategic partnerships around the world

Agora Energy China works in close partnership with Agora Energiewende and Agora Industry, drawing on their cross-sector international expertise to ensure an integrated perspective on climate and energy policy. These strategic partnerships strengthen Agora Energy China's ability to provide science-based recommendations tailored to China's energy transformation, while connecting Chinese experiences with global dialogue on climate action.

The climate advisory works closely also with other partners worldwide, including through the International Network of Energy Transition Think Tanks (INETTT).
